SUMMARY

Information Systems undergraduate focused on machine learning, data science, and predictive modeling. Experienced in building ML workflows with Python, pandas, scikit-learn, XGBoost, LightGBM, CatBoost, and Optuna, including data preprocessing, feature engineering, model training, evaluation, and deployment. Interested in applying machine learning to forecasting, classification, and data-driven decision making.

EDUCATION

Telkom University

Bandung, Indonesia

Bachelor of Information Systems; GPA: 3.34 / 4.00

2024 – Expected 2028

- Relevant coursework: Data Mining, Database Systems, Statistics, Business Process Management, Enterprise Systems, Software Engineering

TECHNICAL SKILLS

Programming: Python, Rust

Machine Learning: scikit-learn, XGBoost, LightGBM, CatBoost, Random Forest, Logistic Regression, Ridge Regression, Optuna

Data Analysis: pandas, NumPy, Matplotlib, feature engineering, model evaluation, time-series analysis

Tools: GitHub, VS Code, Jupyter Notebook, Google Colab, Codex, VPS deployment

PROJECTS

Fraud Detection Machine Learning Pipeline

2026

Python, pandas, scikit-learn, XGBoost, LightGBM, CatBoost, Optuna

- Built a transaction-level binary fraud detection workflow using merged transaction and identity data
- Engineered 500+ behavioral, categorical, missingness, email, device, card, address, and grouped amount features
- Tuned XGBoost, LightGBM, and CatBoost models with Optuna and combined predictions using a stacking ensemble

Stacked Ensemble Weather Forecasting Bot for Prediction Market

2026

Python, XGBoost, LightGBM, CatBoost, Ridge Regression, VPS

- Built a machine learning-based weather forecasting bot using provider forecast data and METAR weather observations
- Implemented a stacking ensemble with XGBoost, LightGBM, and CatBoost as base models and Ridge Regression as the meta-model
- Engineered features from multiple weather providers, forecast signals, temperature observations, and market data
- Deployed a VPS-hosted dashboard to monitor city-level forecasts, model signals, data freshness, and current observations

Quantitative ML Research Framework

2026

Python, pandas, XGBoost, Hidden Markov Models, VectorBT

- Designed a reusable research framework to test time-series modeling ideas through feature engineering, labeling, model training, and backtesting
- Implemented workflows for mean reversion, opening range breakout, and regime-aware analysis using XGBoost and Hidden Markov Models
- Improved research reliability with automated artifact generation, strategy logic tests, and notebook-to-pipeline consistency

LEADERSHIP AND ACTIVITIES

Team Leader

2026

UGM Data Analytics Competition, FIND IT! 2026

Indonesia

- Led a student team in a data analytics competition focused on solving a face spoofing detection problem using deep learning
- Coordinated task division, modeling workflow, analysis direction, and presentation preparation
- Contributed to data preprocessing, exploratory analysis, model development, and result interpretation
